

ABSTRACT OF THE INVENTION

A shaver handle has an outer layer made from a compressible elastomeric material and formed around an inner rigid core. The elongated outer layer is provided with a series of spaced fins having a substantially uniform aspect ratio $D:T$, wherein D is a depth of each individual fin viewed in a direction transverse to a longitudinal axis of the shaver handle and T is a thickness of each of the fins viewed in a direction parallel to the longitudinal axis, the aspect ratio is greater than the depth D .
